

# Renewable integration and sustainability in energy communities

## Save the Date

BEL Combinatie, Eemnes  
28 November 2019 - 7:30PM

### LEF in EEMNES Kick-starting Local Energy Community in Eemnes: *Consumer Onboarding and Q&A*

How can a group of homeowners generate their own electricity for self-consumption or mutually exchange it within the community, settling the price immediately through the application of blockchain technology?

At the event you will have the chance to get in contact with several project stakeholders such as: the Eemnes Energie, a cooperative focused on generating sustainable energy and helping to save on energy consumption; iLECO, the platform provider that enables a local energy market using flexible pricing; EnergieVan, acting as community developer. The project's key supporter Gemeente Eemnes will give a speech about the innovative solution that Renaissance project envisions for the pioneering citizens who want to join the European energy transition.
